

Assignment 3 - Unittest Karma Assignment5

CurrencyConverter

Problem Statement: Given a Currency converter application that converts given value from one currency to another using an open source third party API <https://exchangeratesapi.io/>. Write the unit testcases for this application using Jasmine.

TECH STACK

- Angular12
- Bootstrap
- Jasmine

PREREQUISITES

- Install dependencies `npm install`
- Run the unit test `npm test --code-coverage` which shall run all test cases in folder `test`

Instructions

- You are expecting to write code in the given boilerplate so that you can achieve all high level requirements
- All the detailed instructions are given inside the project
- Understand the comments in the project and write test cases
- Use the sample data given in 'return-data.ts' in test folder to mock service and endpoints
- After writing the test cases unit test your code by running `npm run test` or `ng test --code-coverage`.
